Polaris 6.0 Build Report

Key	Fix Version/s	Public Summary	Netsuite Issue ID
POL-5322	5.6, 6.0	Acquisitions EDI: Error logs were not writing properly after the Unicode conversion. This has been fixed.	13758477
POL-3040	6.0	Acquisitions: Printer options for shelf-ready materials were not sticking when the workform was closed. This has been fixed.	6527338
POL-5405	6.0	Cataloging: MARC record imports were failing if the embedded holding field contained a description (e.g. collection abbreviation) instead of an ID value. This has been resolved and a patch was provided for Polaris 5.6.	14100077
POL-5693	6.0	Circulation (INN-Reach): If a patron no longer wants an INN-Reach item they've requested, the borrowing library can check a 'Return uncirculated' checkbox on the ILL item. This directs staff at item receipt to return the item uncirculated to the lending library. In Leap (only), the message indicating the patron no longer wants the item was missing. This has been corrected.	
POL-5485	6.0	Circulation (INN-Reach): The following occurred when two or more requests were placed against the same title by two different patrons: A 'Final Check-in' API message was not issued when the item for the first patron was circulated and returned to fill the second INN-Reach request. This has been corrected.	
POL-5640	6.0	Circulation (INN-Reach): When the staff member attempted to return a held INN-Reach item no longer required by the borrowing library's patron, the check-in failed. This bug only applied to Leap, not Staff Client. The issue has been fixed.	
POL-3910	6.0	Circulation: Check-In Type of 0 was being written within the Transactions database when the check-in process is being initiated from the Item Record, and only when that item record is in a status of Claim Missing Part. This has been fixed.	9232630
POL-3094	6.0	Circulation: If an item record's history contained a patron marked for deletion, in Leap (only) staff could not open the item record. This occurred most frequently with INN-Reach, where borrowing (virtual) patrons from another institution are automatically marked for deletion after an INN-Reach item has circulated. This issue has been corrected.	
POL-5234	6.0	ExpressCheck: Not all slots from the media dispenser were displaying on the check out receipt when more than one slot was required. This has been fixed.	
POL-4978	6.0	Find Tool: When a staff member did not have access to all bibliographic records, there were some performance issues when searching for bibliographic records in the find tool. This has been resolved.	12628866
POL-1043	6.0	Holds: During the circulation process, staff members without the permission to modify hold requests were able to cancel requests. This has been fixed. Staff must now have the Hold Requests: Modify to perform this task without an override.	10067846
POL-5320	6.0	Holds: Hold requests were not going pending if any linked items used certain "Limit to:" options. This has been fixed.	13757972
POL-5638	6.0	Holds: When denying a hold request and choosing not to re-activate on a title that has only one available item, then placing a hold request on a title, the hold is going pending for that title. Overnight, the hold goes pending for the next title in the queue - meaning there are two holds pending for the same item. This has been fixed.	

POL-4666	6.0	Holds: "If patron is blocked: Block in Staff Client" not blocking according to pickup location. The limit alerts, where the Governing branch = Transacting branch, should be based on the settings for the Pickup Library. This has been fixed.	11406338
POL-3872	6.0	ILL: ILL requests were going in-transit to their check in location when returned to system if the library used centralized processing and floating. This has been fixed.	8909477
POL-5418	5.6, 6.0	ILL: ILL requests were not attempting to send to OCLC upon export. No error was returned to patrons or staff, as the export did not actually fail. This has been resolved.	14225637
POL-4961	6.0	Leap: Previously, if using donor info, all donor fields needed to be completed in order to save an item record. This has been fixed.	12549950
POL-4661	6.0	Leap: Running the 'Uncataloged Titles with Holds' report was causing slowness in Leap. This has been fixed.	11328327
POL-2952	6.0	Leap: Staff were being allowed to set econtent items to a status of claimed returned / never had. This has been fixed.	6527326
POL-5327	6.0	Leap: The "Fills Hold" column in Leap was not accounting for organizations where the parameter "Renewal: Block if there are holds" is set to Yes. If an item satisfies a title-level hold request and there other available items which can fill the request, the Fills Hold column would display No but the Item Fills Request dialog box will appear when attempting to renew. This has been fixed.	13794494
POL-5065	6.0	Leap: The Owning Branch was not being pulled in from the template when creating items. This has been fixed.	13089329
POL-5051	6.0	Leap: An invalid phone error message was occurring when deleting a phone number that had been once been listed for Additional TXT. This has been fixed.	13043624
POL-970	6.0	Lost Item Recovery: For libraries that do not charge overdue fines, items were reappearing on the patron claims view as "Lost/Accuring" when the automatic lost item recovery threshold was reached. This has been resolved.	6527089
POL-5343	6.0	PAC / Cataloging: Auto-suggest was not working for series information. This has been resolved.	13905221
POL-5326	6.0	PAC: After the responsive PAC development, the PowerPAC holdings web service was down. This has been resolved.	14245199
POL-5397	6.0	PAC: Our third party dashboard service required an update for both Unicode support and newer SQL server versions (2016). This has been resolved.	14019945
POL-5054	6.0	PAC: The language selection was displaying when English was the only option. This has been fixed so the option will only appear when the PAC language can be changed.	13047300
POL-5000	6.0	PAC: When printing PAC pages, some images and menu options were displaying the full URL instead of the image/option text. This has been resolved.	12704666
POL-5478	6.0	PAC: on some mobile devices, the less link does not appear after expanding full display description. This has been fixed.	14683678
POL-4246	6.0	Permissions: Staff were able to modify resource entities without the Bibliographic Records: Modify permission. This has been resolved.	10058996
POL-4243	6.0	Permissions: Staff without access to vendor accounts were able to open the work form via a link the bibliographic record. This has been resolved.	10056073

POL-4941		6.0	Picklist: If a staff member has permission to access Leap, the picklist, and modify holds, but no permissions at all for items, patrons or anything else in Circulation, they can link from a hold request to a patron record and see some brief information despite a permission block displaying. This has been fixed.	12490279
POL-4942		6.0	Picklist: The hold requests Modify was required to move a request from pending to located. This was problematic when the user didn't have modify permissions for the pickup branch. This has been fixed by adding a new permission for Locate/Return and basing all Picklist permissions on the user's logged on branch.	12490381
POL-4816		6.0	Security: Password restrictions differed depending on where they are entered. This has been fixed. Leap / PAC and Staff Client now support consistent restrictions.	12095218
POL-3471		6.0	Serials: A SQL error was being thrown when attempting to delete a collection that was tied to a textual holdings note. This has been resolved.	7616715
POL-4410		6.0	Staff Client: When a patron is configured for eReceipts, paying a fine through Comprise eCommerce in the staff client will not refresh their patron status and it will appear that they still have the fines on their account. This has been fixed.	10508520
POL-3388		6.0	Staff Client: Pay All from patron account using integrated eCommerce was removing all credits from the patron's account. This has been fixed.	6527368
POL-2950		6.0	Sys Admin: The alternate contact field on the organization workform was unable to be set to None. This has been fixed.	6527323
POL-4415		6.0	eCommerce: The Minimum Fine setting in SA for EnvisionWare is being checked for payments in PAC, but it is not editable. This setting should be coming from Envisionware, this has been fixed.	10514645
POL-1854		6.0	eCommerce: When a credit card payment was made using Envisionware, and an ereceipt was generated, the correct totals were not reflected on the ereceipt. This has been fixed.	6527250
POL-4967		6.0	eContent: EContent items belonging to certain publishers aren't allowed to be shared through CloudLink, but their availability still displays in the PAC as though they can be checked out. These items are now marked as restricted.	12549949
